

## Project Approach

- I have used Service Oriented Architecture(with repositories layer) in the task using Symfony 3.4 framework and SqlLite3.
- In my approach I have focused on SOLID principles, object oriented style and MVC as well as Dependency Injection Pattern.
- I wrote unit tests using PHPUnit 7.5

## Setup Guide

- Please run the following command to clone project  
**Git clone [https://github.com/naeemnasir-de/lillydoo\\_address\\_book.git](https://github.com/naeemnasir-de/lillydoo_address_book.git)**
- Please run the following composer install command to install vendors  
**composer install**
- Please run following command on the project root to start project  
**php bin/console server:start**
- Please run following command to run test cases  
**./vendor/bin/phpunit src/ContactBundle**

If you face any problem while setting up the project, feel free to reach out to me.
