Project Approach

- I have used Service Oriented Architecture(with repositories layer) in the task while using Symfony 3.4 framework and SqlLite3.
- In my approach I have focused on SOLID principles, object oriented style and MVC as well as Dependency Injection Pattern.
- I write unit tests using PHPUnit 7.5

Setup Guide

Please run the following command to clone project
https://github.com/naeemnasir-de/lillydoo_address_book.git

Please run the following composer install command to update vendors **composer install**

Please run following command on the project root to start project
php bin/console server:start

Please run following command to run test cases
./vendor/bin/phpunit src/ContactBundle

If you feel any problem while setup the project, please let me know to configure it collaborated.
